Karl Horky
Front-end Engineer

The front-end is important. It is the surface between user and API, between content and search engine, between impression and brand.

I develop compelling, usable experiences spanning these divides.

Why? With quality services, I believe the web has the power to improve quality of life. This is my ambition, what drives me.

Leadership	Agile Methodologies	Data Analysis

Experience

SendWithUs
Developer

2013 - Present

Front- and back-end developer on transactional email management web application for marketers. Built with Django and Knockout.js.

wollzelle GmbH
Web Developer
2011 - 2013

Front- and back-end development for some of the world's leading brands such as Gucci and Trodat. Part of projects such as:

- transitioned Guccitimeless.com to new, modern design running on Rails
- rebuilt responsive Wollzelle.com with mobile-optimized UI
- created digital, interactive product manual for Gucci watch with Backbone.js

Lead advances into object-oriented css and responsive styling on the team. Played a part simplifying user experience flows and optimizing code factoring. Synergy as part of an agile team.

MYRA Systems *w/* CGI Group
2008 - 2011
Web Developer

Interface design and web development consulting for the B.C. provincial government in Canada for web properties such as:

- https://www.healthlinkbc.ca/
- https://www.bcbedline.ca/
- https://connect.health.gov.bc.ca/

Managed customer relationships with multiple branches of the government and outside contractors. Participated in service-delivery processes for large organizations, such as those found in ITIL. Demonstrated accountability and initiative through formal estimates.

MarketMAX IMS
2008 - 2011
Print Designer, Web Developer

Branding packages including corporate identity design and website development.

Deliverables included:
- print marketing such as business cards
- database-driven web product catalogues
- virtual tour web application
- CMS backends
